ABOUT ME

Hi, I'm Ian! I'm a senior software engineer who has 10+ years of experience building and delivering backend services and modern web applications across the stack. I have a proven track record of shipping high-usage features to millions of users. I've worked in environments that range from small, startup-like structures to large, corporate agile teams delivering features on 2-week sprint cadences. Outside of work, I have a wife and daughter whom I adore. In my free time, I enjoy spending time on my passions which include my family, NFL football, golf, video games, and playing the guitar.

EXPERIENCE WITH

- **A.I. Tools:** Claude Sonnet 4.6
 - **Languages:** Golang, TypeScript/React, pgSQL
 - **Web Technologies:** Material UI, OpenAPI
 - **Databases:** PostgreSQL
 - **Cloud Technologies/Observability:** AWS (EC2, S3, Route53, CloudFormation, SQS, ECR, ECS, Step Functions, Lambda), New Relic
 - **Software Methodologies:** RESTful APIs, Agile (SAFe)
 - **Software Tools:** Git/GitHub, VS Code, Jira
 - **DevOps:** Docker, Docker Compose, Terraform, Kubernetes
 - **Operating Systems:** Mac OS X, Windows, Linux (Mint)
-

WORK EXPERIENCE

BETHESDA SOFTWARES | SR. SOFTWARE ENGINEER

September 2021 – July 2026 | Hybrid (Remote/Rockville, MD)

- Maintain and optimize several scalable Golang backend services, supporting high-volume CRUD operations, backed by PostgreSQL and Redis; handling hundreds of thousands of daily requests and auto-scales in AWS.
- Developed and deployed a Golang application processing system with both user and admin-facing React interfaces, featuring RESTful endpoints, vendor API integration, and automated SES email updates to facilitate coordinated application handling.
- Maintain and enhance both external and internal React applications, including a complex multi-component management interface for users and an admin portal for data curation and moderation.
- Maintain a mission critical payout processing daemon, leveraging SQS for in-order processing (to ensure system integrity and prevent data loss), S3 for long term storage,

and Postgres for data persistence, whose infrastructure was deployed and source-controlled using Cloudformation

- Developed serverless ETL workflows using AWS Step Functions and Lambda to automate batch data ingestion and transformation from legacy systems into a modernized Postgres environment
- Integrated New Relic for live data telemetry, leveraging alerts for proactive service monitoring, and maintaining runbooks for on-call NOC support
- Leverage Claude to maximize development efficiency, specifically with unit testing, feature prompt engineering, and rapid tool/script creation
- Daily use of Docker and Docker Compose for local development, as well as building and deploying images for production deployments using ECR and ECS
- Consistent usage of modern security practices, including API key and JWT generation and validation
- Leverage unit, integration, and end-to-end test suites to ensure live services don't experience regression as new features are developed and deployed
- Maintain verbose OpenAPI documentation for customer integration
- Consistently serve as my team's "support hero": a point of contact to interface with external teams to answer service questions and triage incidents
- Conduct thorough and meticulous reviews on peer pull requests

SKYLINE TECHNOLOGY SOLUTIONS | FULL STACK DEVELOPER

November 2019 – September 2021 | Remote

- Implemented a disaster recovery solution for our suite of applications in AWS using services such as EC2, S3, Route53, and CloudFormation
- Worked on both the front- and back-end to maintain a JavaScript-based web application that leveraged technologies such as Sails.js, AngularJS, and MongoDB
- Developed several aspects of a MVC style RESTful API including endpoints, controllers, reusable services, and general middleware
- Leveraged Docker and Docker Compose to migrate our web application to a microservice infrastructure
- Handled various front-end user interface updates based in ES6 and Sass
- Used Ansible to provision and deploy several applications to remote Amazon EC2 hosts
- Used Gitlab's CI/CD pipelines to build both Docker images and release artifacts
- Regularly took part in extensive merge reviews to ensure top code quality, provide visibility into code changes, and share knowledge with peers about lessons learned
- Worked through all development using the Linux Mint operating system

POPULUS GROUP | SENIOR FULL STACK SOFTWARE ENGINEER

August 2018 – September 2019 | Hanover, MD

- Worked with a team of six developers to develop the firm's first business-to-consumer, public facing application, CareerCircle, using the .NET Core 2.0 framework

- Developed and maintained a CI/CD pipeline for build release automation using Azure Pipelines YAML, including the implementation of blue-green deployments using deployment slots to swap between staging and production environments
- Utilized Azure to manage a multi-tiered application, including two .NET Core 2.0 services, a node.js service and a database
- Developed React components for dynamic elements and to enhance the user experience
- Worked to integrate a headless content management system (ButterCMS)

T. ROWE PRICE

Senior Software Engineer | February 2016 – August 2018 | Owings Mills, MD

Software Engineer | September 2015 – February 2016 | Owings Mills, MD

- Focused mainly on front-end development throughout my entire tenure, leveraging HTML/JSP, CSS, and JavaScript/jQuery
- Led a team of three developers to regulate the firm's public-facing mutual fund lookup property through the scrum process, leveraging Rally
- Led a year-long effort to develop and inject a site navigation centralized in our CMS, into 9 public facing digital properties.
- Helped to plan and execute a version-upgrading project for the T. Rowe Price Personal Investing Site on the Adobe Experience Manager platform (5.6 to 6.2)

PROJECTS

JuniorGM.com

- Utilized React and Golang to create a mock draft simulator application, hosted in AWS.

EDUCATION

UNIVERSITY OF MARYLAND BALTIMORE COUNTY

BS IN COMPUTER SCIENCE

May 2015 | Baltimore, MD

- **GPA:** 3.49/4.0
- **Major GPA:** 3.77/4.0
